

Dear Aidoc team,

I am excited to apply for the Clinical AI Product Manager role at Aidoc.

As a Product Manager at Hyro AI, I led the development of HIPAA-compliant conversational AI solutions for enterprise healthcare organizations, managing the entire product lifecycle and prioritizing roadmap items in coordination with our product managers. My software engineering background enabled me to communicate effectively with R&D, understand complex technical concepts, and align product requirements with technical needs.

Leveraging my experience in NLP, AI, and Healthcare, I drove significant improvements in patient experience and automation rate of value-based healthcare workflows. I collaborated with cross-functional teams including Sales, Marketing, Solutions, and Customer Success to enhance user experiences through data-driven insights and UX design, while maintaining strong customer relationships and focusing on business outcomes.

My experience in the ultrasound department at GE Healthcare showed me the critical role of radiology and the value of developing advanced medical solutions. I'm excited to apply my backgrounds in product management, research, and technical skills to create innovative, user-focused AI-driven healthcare solutions at Aidoc, contributing to the company's mission.

I look forward to the opportunity to discuss how I can support Aidoc's vision and goals.

Sincerely,

Eran
